

Hi friends! In this video we are going to be building some fun things with Python that can actually help automate tasks in your life! What should we build next?

My Story I am currently a software developer who once modeled and thought I wanted to pursue a career in the fashion industry. While I was modeling in Hong Kong, I eventually felt the desire to further my education. I decided to depart the modeling world and move back to Canada, knowing that could be the end of my modeling opportunities. I attended Ryerson University for GCM (Graphic Communications Management), as I thought I might still work in the fashion industry in another capacity. It was in my last year of university, I was introduced to a very basic coding course. I instantly fell in love. From there I knew I wanted to pursue software development but didn't have a clue where to start. I didn't want to go back to university as I just completed a four-year degree. I decided to enroll in a 10-week intensive coding Bootcamp. From there I started working at a small startup learning and growing my technical and soft skills. I then transitioned to a larger company where I am a software developer and technical consultant today. Automating My Life with Python: The Ultimate Guide | Code With Me
